

ABSTRACT OF THE DISCLOSURE

METHOD AND APPARATUS FOR THE DISPOSAL OF WASTE FLUIDS

5 An innovative method and apparatus for disposing of waste fluids, especially human
body fluids such as are generated during surgery, into a hospital's sanitary sewer system is
provided. A conduit system is adapted to transport waste fluid from a receptacle to a sanitary
sewer using an eductor having a venturi device. The conduit system includes first and second
conduits. First and second connectors are used to easily connect the first conduit to the second
10 conduit. The second connector includes a flap that acts as a check valve.
